

Break Free From Glue

Make the move toward a glue-free world with the TacTiles® Installation System from InterfaceFLOR. We pioneered flooring flexibility with modular carpet. Now our TacTiles installation system creates the next generation of installation by offering convenient installation, as well as easy replacement and reclamation.

A new TacTiles connector, designed exclusively for the installation of InterfaceFLOR carpet tile backed with Graphlar® and Graphlex®. (Graphlex available only in Europe.)

MINIMIZE DISRUPTION

Because TacTiles connectors contain no liquid components, the use of them virtually eliminates the issue of VOCs (Volatile Organic Compounds). So they can be installed almost anywhere at anytime – making carpet installation convenient for you. Take control of your life, your office and your floor. Do the right thing. Ditch glue.

TacTiles connectors meet LEED requirements for Low Emitting Materials – Adhesives and Sealants (based on SCAQMD Rule #1168 VOC Limit for Indoor Carpet Adhesives of 50g/L, less water).

TacTiles connectors are adhered to the corners of InterfaceFLOR carpet tiles.

You can install InterfaceFLOR carpet tile with TacTiles connectors almost anywhere at anytime.

TAKE CONTROL

With the TacTiles installation system, you can create a durable installation of InterfaceFLOR carpet tiles over your existing floor* without permanent adhesion. TacTiles connectors adhere tiles to one another, creating a "floating floor"—making for easy installation, removal and replacement. So whether you're updating the entire 17th floor, creating an area rug or replacing a couple of tiles, you'll get dimensional strength with individual flexibility.

With non-releasable full spread glues, tiles are permanently stuck to the floor and thus require digging up the carpet when it's time to replace. This may damage the substrate beneath, leaving battle scars no floor should endure. Not to mention, it doesn't give you the freedom and control that a glue-free modular floor can provide.

**Not recommended for installation over existing carpet. Be sure to test for moisture and install MoistureGard™ 2.0 as needed. Reference InterfaceFLOR's detailed Installation Instructions for details.*

Use TacTiles connectors to install area rugs in addition to wall-to-wall installations.

Unlike with non-releasable full spread glue, TacTiles connectors adhere carpet tiles to one another, not the floor. Thus, a TacTiles installation does not require "digging" up the flooring for removal and replacement, alleviating future labor cost and potential damage to existing substrates.

STAY STRONG

Being pulled by the dark and sticky side? Don't sweat it – the TacTiles installation system by InterfaceFLOR has you and your floor covered. It all started more than 30 years ago when InterfaceFLOR introduced free-lay tile capabilities to North America. And now with more than three decades of proven performance, only InterfaceFLOR's dimensionally stable backing can provide the groundwork for your newfound freedom.

Designed to “grab” the floor for wall-to-wall applications, as well as for area rugs, the mold and mildew-resistant backing doesn't upcurl or buckle. Use of the TacTiles installation system allows for individual tile flexibility yet magnifies InterfaceFLOR's backing strength as the InterfaceFLOR tiles unite to provide unsurpassed flooring performance. All this helps maintain your flooring investment, as well as endure hedging, heavy foot traffic and even office reconfigurations. Are you a believer yet?

The TacTiles system provides a blanket of strength while maintaining individual tile flexibility.

Even furniture moving and other office reconfigurations won't impact your installation.

BE GOOD TO THE ENVIRONMENT

At InterfaceFLOR, every creative, manufacturing and building decision we make is intended to move us closer to eliminating any negative impact our company may have on our environment. As part of this mission, we've been reclaiming carpet since 1994 through our ReEntry® Carpet Reclamation program. In fact, we've reclaimed over 167 million pounds to date. ReEntry 2.0, the latest evolution of our program, allows us to reclaim all types of carpet (broadloom and tile, commercial and residential) regardless of face fiber or backing type, keeping even more waste out of landfills and further reducing our reliance on virgin raw materials. InterfaceFLOR recycles reclaimed and separated GlasBac® and GlasBacRE backings, including TacTiles connectors, into new carpet tile backing using our Cool Blue™ technology.

What's more, the TacTiles system generates less waste during installation, and has an environmental footprint that is over 90% lower than that of traditional glue. So InterfaceFLOR meets its environmental mission while you eliminate the sticky mess of glue. Talk about a win-win.

InterfaceFLOR carpet tile, along with TacTiles connectors, can be reclaimed and recycled through InterfaceFLOR's ReEntry 2.0.

RELY ON EXPERIENCE

With more than 35 years of laying the foundation for North America's flooring, InterfaceFLOR's dimensionally stable GlasBac® backing has stood the test of time. It's the backbone of functionality, strength and freedom. And it's infused with Intersept®, a proprietary antimicrobial preservative built into the carpet to protect it against mold, mildew, bacteria and odor-causing microorganisms. In other words, InterfaceFLOR's GlasBac backing system ensures a long lasting modular carpet tile installation.

TacTiles connectors are now also available for our Graphlar® backing system, which is standard on the Flor™ and Super Flor™ styles made by InterfaceFLOR in Europe and available here. Like GlasBac, Graphlar has a long history of performance and stability.

*Be sure to use the proper version of TacTiles connectors for the GlasBac and GlasBacRE or Graphlar backed InterfaceFLOR carpet tile you're installing.

Only InterfaceFLOR's free-lay backing capabilities can provide the groundwork for the revolutionary TacTiles installation system.
