

Antron Lumena®
Only by DuPont

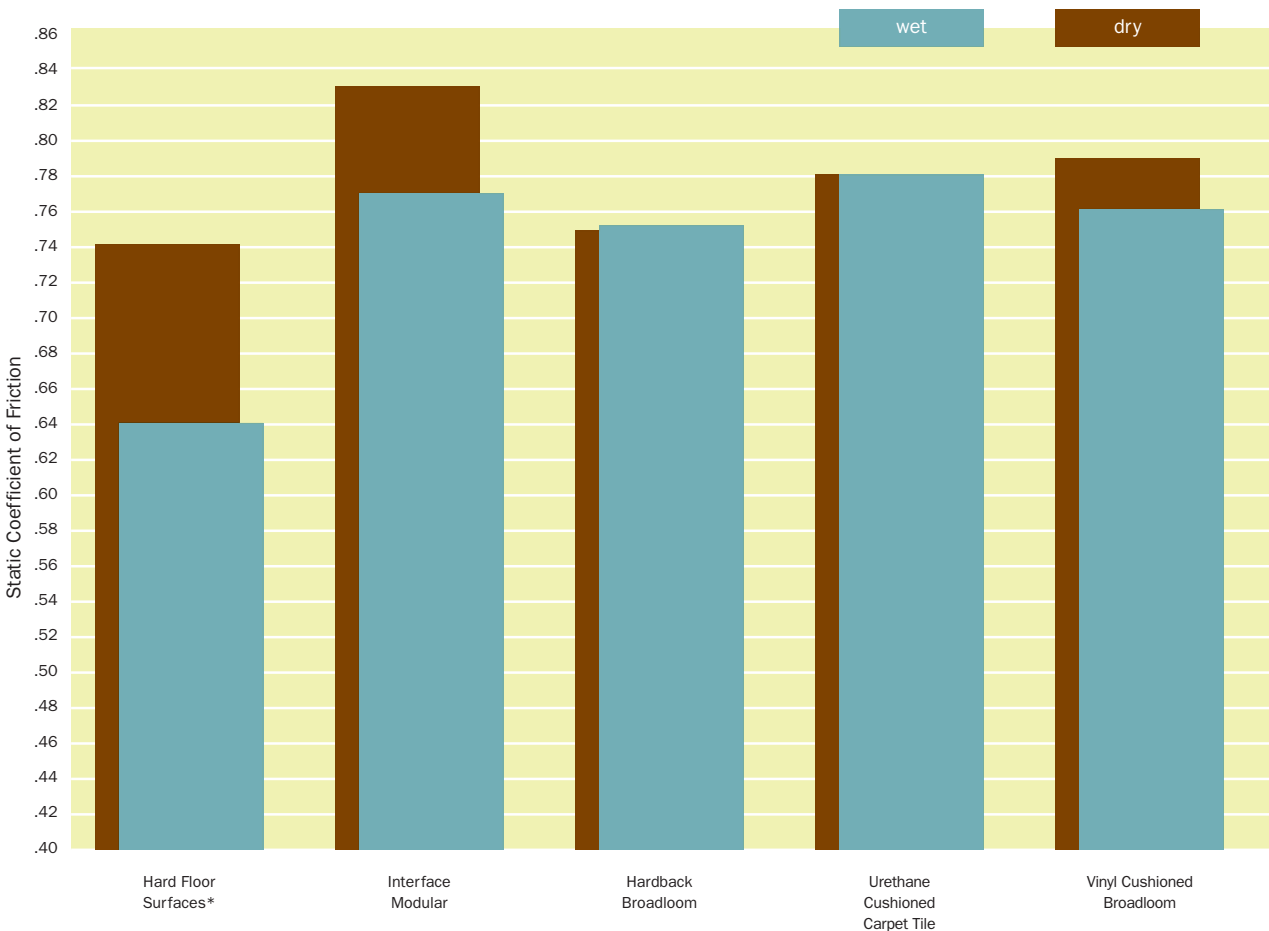

PRODUCT: New Leaf™ in colorway Sweetgum (250 yard minimum)

A SAFER SURFACE

The dense fiber surface of Interface modular carpet reduces instances and severity of slip and fall accidents for patients, visitors and staff.

Interface modular carpet products provide increased protection from slips and falls. The dense fiber surface of our products reduces instances and severity of slip and fall accidents for patients, visitors and staff.

The Americans with Disabilities Act (ADA) suggests that all wet or dry handicap accessible walking surfaces have a minimum static coefficient of friction (SCF) of .60. The higher the SCF, the safer the surface. Interface modular carpet rates an average of .83 SCF for dry surfaces and an average of .77 for wet surfaces.

*Hard Floor Surfaces includes VCT, Linoleum, and Sheet Vinyl.
